

WRITTEN IS NOT DEPLOYED

Your AI policy travels **seven layers** before it changes anything

Most of the AI policies I've read are specific through layer three.

LAYER 1

Principle

The value nobody argues with: "use AI responsibly."

LAYER 2

Policy

The written rule. Approved tools, prohibited data.

LAYER 3

Standard

What "verify the output" specifically requires.

LAYER 4

Workflow

Where that step actually sits in the real work.

LAYER 5

Tool behavior

What the software permits, blocks, or quietly logs.

LAYER 6

User action

What one person actually does at 4:00 on Thursday.

LAYER 7

Evidence

What remains afterward proving it actually happened.

AI IMPLEMENTATION IN REGULATED ENVIRONMENTS
